# **Treasury Technology Health Check**

## What is Treasury Technology Health Check?

A service where Actualize **will review and assess** client usage of the treasury technology software (such as a TMS, or trading platform), current state procedures, user proficiency with the application, and overall operational effectiveness.

## **Key Deliverables**

- Comprehensive overview of current client utilization including functions deployed, connectivity with other systems and listing of potential issues and/or concerns
- Peer benchmarking assessment specific to utilization of your software solution and user system proficiency
- Industry best practice recommendations with clear and actionable roadmap

# Why is it important?

Periodically evaluate how you are utilizing your systems, especially if:

- > They were implemented a few years ago
- > There has been significant turnover in the Treasury department

Client requirements and personnel as well as treasury software capabilities are constantly changing so this check will:

- > Ensure the ultimate value is being obtained from the system
- > Enhance understanding of system use to proactively identify any potential issues

# **Health Check Process**

A proven methodology to execute the Health Check will be performed by a seasoned Treasury professional.

## **Confirm Scope**

Conduct initial scoping calls and then provide a **client customized questionnaire**. The goal is to collect information to educate the team to maximize potential.

## **Conduct Interviews**

Using a **pre-defined checklist**, Actualize will conduct interviews and perform a walk through of treasury operational activities.

## **Data Compilation**

Compile data, confirm open questions with client and prepare **peer benchmarking** assessment, ranking client against industry peers.

## **Best Practices**

Create **best practices** recommendation with clear action plan. Actualize will communicate the detailed observations and supporting documentation and discuss next steps to enhance the system

Enhanced

**User Efficiency** 

Assessment of staff proficiency

with the application and

recommendations for specific areas

of training focus to increase client competency and improve staff morale and skills.

# Value Added to Clients

Health Checks will provide benchmarking, best practice assessment, and a clear execution plan.

### Increased Technology Capabilities Awareness

Users will be educated on available application capabilities including a summary of recent system enhancements.

#### Improved Operational Efficiencies

Recommended opportunities to enhance operational efficiencies through utilization of system functionality or process changes.

#### Industry Best Practices

Provide client with benchmarking assessment against peers with actionable recommendations to achieve best-in-class Treasury organization.

#### **Process Improvements**

Recommendations will include enhanced workflow and controls opportunities including both system and operational improvements.
